

- 1. Injection machine—for bottle perform & cap**
(to fix the mould, and melt the plastic material for preparation of injection)

- 2. material vacuum auto loader**
(to vacuum the plastic material from the material bag and feed to the injection machine material funnel)

3 mould auto temperature controller

(to control the temperature of mould, for guaranteeing the injection quality)

4. Mould chiller

(to cool the recycle water then cool the mould)

4. material muller

(to crush the bad perform, or spilth to smaller piece, for mix with new material together, for preparation again)

5. material dryer

(to dry the material for injection machine)
